

Evidence of Performance

thermal transmittance

Test report 421 41402e

This test report is a translation of test report 410 41402 dated 02 September 2009

Client **GUARDIAN EUROPE S.A.**
Zone Industrielle Wolser

3452 Dudelange
Luxembourg

Basis
EN 673 : 1997-11
+A1 : 2000-10 + A2 : 2002-12
Glass in building – Determination of thermal transmittance (U value) – Calculation method

Product	Insulating glass unit
System designation	Guardian ClimaGuard® 1.0
the following construction varies, see type sheet	
Construction	see type sheet
Gas filling	see type sheet
IR-Coating Guardian ClimaGuard® 1.0 coated surface: see type sheet, $\epsilon_n=0.01^*$	
Type of coating	*source: as specified by the manufacturer
Specifics	-/-

Instructions for use
This test report may be used to classify the thermal transmittance U_g .

Validity
The data and results given relate solely to the described, tested object.
Testing the thermal transmittance does not allow any statement to be made on further characteristics of the present structure which could define performance and quality.

Thermal transmittance

$$U_g = 0.4 - 1.6 \text{ W}/(\text{m}^2 \cdot \text{K})^*$$

*exact value depends on the construction (see type sheet)

Notes on publication

The ift Guideline "Conditions and Guideline on the Use of ift Test Reports" applies.

The cover sheet can be used together with the type sheet as an abstract.

ϵ_n^* normal emissivity; source: as specified by the manufacturer

E^{**} coated surface

1 Object

1.1 Description of test specimen (All dimensions in mm)

Product	Insulating glass unit
System designation	Guardian ClimaGuard® 1.0
Construction	see type sheet
Coating	
Type / Manufacturer	Guardian ClimaGuard® 1.0 / Guardian
Coating level	see type sheet
Normal emissivity ε_n	0.01*
Gas filling in cavity	source: as specified by the manufacturer as specified by the client
Gas type	see type sheet
Nominal volume in %	see type sheet

The description is based on the documentation of **ift**. Numbers and names of material were given by the client. (Further data provided by the client are marked with *).

1.2 Representation of insulating glass construction

The illustration was produced by the **ift** as a schematic representation of the cross section.

2 Procedure

2.1 Process

Technical basis

EN 673 : 1997-11

+A1 : 2000-10

+A2 : 2002-12

Determination of thermal transmittance (U value) –
Calculation method

Boundary conditions

as required in the standard

Inclination of glazing

$\varepsilon_n = 0.89$

$\varepsilon = 0.837$

$h_i = 8 \text{ W}/(\text{m}^2 \cdot \text{K})$

$h_e = 23 \text{ W}/(\text{m}^2 \cdot \text{K})$

vertical

normal emissivity of the room sided surface

corrected emissivity of the room sided surface

external heat transfer coefficient

internal heat transfer coefficient

Deviations

There are no deviations from the test procedure or test conditions.

2.2 Testing

Date/Period

31 August 2009

Testing personnel

Christine Lux, Dipl.-Phys.

3 Detailed results

see type sheet
